

# Api para Visualización de Películas

GUSTAVO GALICIA

Febrero 2023

DigitalOcean

<http://104.131.170.149>

GitHub

[\*\*https://github.com/gustavogalicia/Prueba-tecnica.git\*\*](https://github.com/gustavogalicia/Prueba-tecnica.git)

## Objetivo

El objetivo es realizar un micro aplicativo con características esenciales para una estructura general de un proyecto.

### Stack Tecnológico:

- Laravel 10
- MYSQL
- JWT

## Requerimientos

1. Configurar Laravel con MYQL para recibir registros de usuarios con nombre, email, teléfono y password, api para creación del usuario.
2. Con JWT crear un login de usuarios con email y password, autenticando al usuario y devolviendo un token para consumir los servicios, api para login de usuario.
3. Guardar logs de entradas de usuarios para mostrar el registro del movimiento del aplicativo.
4. API para traer un listado de las ultimas películas con paginación y máximo 15 items por pagina, token de autenticación en header.
5. API para buscar una o muchas películas filtrando por nombre, token de autenticación en header.
6. API para marcar la película como favorita, token de autenticación en header
7. API para traer listado de películas marcadas como favoritas, token de autenticación en header.
8. API para traer los logs de los movimientos del login de usuarios, token de autenticación en header.

## Cronogramas de Actividades

No.	Tareas	Responsable
1	<b>ANALISIS Y REQUERIMEINTOS</b>	
1.1	Configurar Laravel con MYQL para recibir registros de usuarios con nombre, email, teléfono y password, api para creación del usuario	Gustavo Galicia
1.2	Con JWT crear un login de usuarios con email y password, autenticando al usuario y devolviendo un token para consumir los servicios, api para login de usuario	Gustavo Galicia
1.3	Guardar logs de entradas de usuarios para mostrar el registro del movimiento del aplicativo	Gustavo Galicia
1.4	API para traer un listado de las ultimas películas con paginación y máximo 15 items por pagina, token de autenticación en header	Gustavo Galicia
1.5	API para buscar una o muchas películas filtrando por nombre, token de autenticación en header	Gustavo Galicia
1.6	API para marcar la película como favorita, token de autenticación en header	Gustavo Galicia
1.7	API para traer listado de películas marcadas como favoritas, token de autenticación en header	Gustavo Galicia
1.8	API para traer los logs de los movimientos del login de usuarios, token de autenticación en header	Gustavo Galicia
2	<b>DISEÑO</b>	Gustavo Galicia
3	<b>DESARROLLO</b>	Gustavo Galicia
3.1	Configuración de ambiente de desarrollo	Gustavo Galicia
3.2	Configuración de Base de datos	Gustavo Galicia
	Creación del Proyecto de Laravel y configuración	Gustavo Galicia
3.3	Creación de Endpoint	Gustavo Galicia
4	<b>PRUEBAS</b>	Gustavo Galicia
4.1	Testing	Gustavo Galicia
5	<b>DESPLIEGUE</b>	Gustavo Galicia
5.1	Adquirir hosting en digitalOcean	Gustavo Galicia
5.2	Configuración ambiente de producción para el Server de Aplicaciones	Gustavo Galicia
5.3	Despliegue	Gustavo Galicia
6	<b>Mantenimiento</b>	Gustavo Galicia

1. Configurar Laravel con MYQL para recibir registros de usuarios con nombre, email, teléfono y password, api para creación del usuario.

```
DB_CONNECTION=mysql
DB_HOST=127.0.0.1
DB_PORT=3306
DB_DATABASE=prueba_tecnica
DB_USERNAME=root
DB_PASSWORD=root
```

Preparación para la Migración de Tablas

Creación de para la table users

```
7   return new class extends Migration
8   {
9       /**
10        * Run the migrations.
11        */
12        public function up(): void
13        {
14            Schema::create('users', function (Blueprint $table) {
15                $table->id();
16                $table->string('name');
17                $table->string('email')->unique();
18                $table->timestamp('email_verified_at')->nullable();
19                $table->string('password');
20                $table->string('telefono', 8);
21                $table->rememberToken();
22                $table->timestamps();
23            });
24        }
25
26        /**
27         * Reverse the migrations.
28         */
29        public function down(): void
30        {
31            Schema::dropIfExists('users');
32        }
33    };
```

Creación de la tabla login\_logs

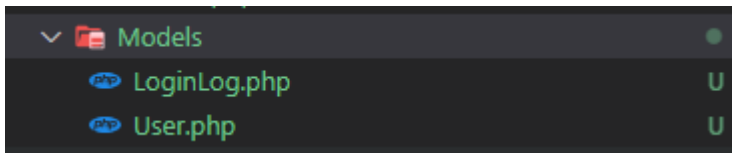

```
return new class extends Migration
{
    /**
     * Run the migrations.
     */
    public function up(): void
    {
        Schema::create('login_logs', function (Blueprint $table) {
            $table->id();
            $table->string('name');
            $table->string('email');
            $table->string('url');
            $table->timestamps();
        });
    }

    /**
     * Reverse the migrations.
     */
    public function down(): void
    {
        Schema::dropIfExists('_login_logs');
    }
};
```

Ejecución del comando **php artisan migrate --seed** para crear las tablas y crear un usuario por defecto.

2. Con JWT crear un login de usuarios con email y password, autenticando al usuario y devolviendo un token para consumir los servicios, api para login de usuario.

Creación de los modelos

```
<?php

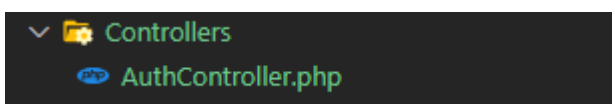

namespace App\Models;

// use Illuminate\Contracts\Auth\MustVerifyEmail;
use Illuminate\Database\Eloquent\Factories\HasFactory;
use Illuminate\Foundation\Auth\User as Authenticatable;
use Illuminate\Notifications\Notifiable;
use Laravel\Sanctum\HasApiTokens;
use Tymon\JWTAuth\Contracts\JWTSubject;

class User extends Authenticatable implements JWTSubject
{
    use HasApiTokens, HasFactory, Notifiable;

    /**
     * The attributes that are mass assignable.
     *
     * @var array<int, string>
     */
    protected $fillable = [
        'name',
        'email',
        'password',
        'telefono',
    ];
}
```

Creación del Controlador de Autenticación

## Creación de los endpoints.

### Endpoint de Registro de Usuario

Endpoint	http://104.131.170.149/api/auth/register/
Headers	<b>Accept:</b> application/json <b>Content-type:</b> application/json
